Eurolite DXT-Series - Made in Germany

The Eurolite DXT series consists of four RDM DMX splitters, a DMX truss splitter and a DMX merger. The special thing about the products: The series was completely developed and manufactured in Germany. It is primarily aimed at professional users who value quality and reliability.

Stable and reliable

The high-quality components catch the observer‘s eye right from the first glance at the devices of the DXT series: The developers have chosen the proven quality of PowerCon and Neutrik for the connections. The housings of the devices are very stable, some of them already prepared for mounting on trusses and suitable for the hard use on tour.

More functions for comfortable working

In addition to their high manufacturing quality, the devices of the DXT series also impress with their range of functions: four of the RDM splitters, for example, feature LED control indicators for the output channels and selectable functions for a possible failure of the DMX signal.
Thanks to their well thought-out concept, operation of the devices remains simple and convenient. In case of any problems, their partially modular design makes repair easier.

 Delivery, technical changes, errors and omissions exempted. Please take notice of the user manuals and latest information which can be downloaded from our site. All pictures are similar and partially symbolic.
