

KLS-3002 NEXT

The next generation of KLS

With the KLS-3002 Next, Eurolite presents the next stage of the compact light evolution: with powerful spots and RGBAWUV color mixing.

Proven concept, modern technology

The well-proven combination of 4 spots on a bar, familiar from older KLS models, has remained the same. The most modern versions of LEDs are now being used: 28 units with 10 watts each and a high level of effectiveness ensure high light output. Thanks to color mixing in 6 colors, particularly beautiful shades are possible: in addition to red, green and blue, white and amber provide great pastel and yellow shades. With the UV LEDs, even black light effects are now possible.

Silent and flexible

But also the hardware has changed a lot: For example, the brackets of the individual spots are now even more massive and the power cable is much longer than before. The bar can now also be mounted flying (for example on a truss). The connectors for this can be attached in seconds with quick-release fasteners. Despite the high light output, the system does not require a fan, so it is absolutely noiseless and does not suck in any dust. Further lighting effects can be screwed onto the bar, two sockets are available for the power connection.

Control

If you want to control your system via wireless DMX, you will be happy to have a new USB socket. A Quick DMX receiver can easily be plugged in here. If you want to work completely without any external control, you will be happy about the many well thought-out stand-alone programs. In addition, a static color can now be set for each spot separately for use without a controller. The supplied carrying bag is particularly robust and makes the system easy to transport.
